

Accounts Payable Analysis: Detect Waste. Strengthen Control. Optimize Spend.

Accounts Payable is central to managing vendor relationships and controlling costs, yet inefficiencies and policy breaches often go unnoticed until they affect working capital. Manual reviews and sampling limit visibility across large transaction volumes, increasing the risk of errors and noncompliance.

MindBridge applies 100% AI-driven analysis across the AP process, continuously monitoring payments, vendor activity, and control performance. By uncovering anomalies and control issues in real time, organizations improve payment accuracy, strengthen compliance, and enhance working capital performance.

Turn financial data into measurable outcomes:

Duplicate Payments: Reduces waste and improves cash flow by identifying and preventing repeated vendor payments.

Unapproved Rates: Ensures pricing accuracy and cost control by flagging rates outside negotiated contracts.

Maverick Spend: Decreases off-contract purchases and reinforces procurement compliance.

Irregular Activity: Detects unusual vendor or account behavior to prevent fraud and control breakdowns.

Payment Term Variance: Improves working capital by identifying inconsistencies in payment timing.

Manual Errors: Reduces rework and misstatements by pinpointing data entry or posting errors.

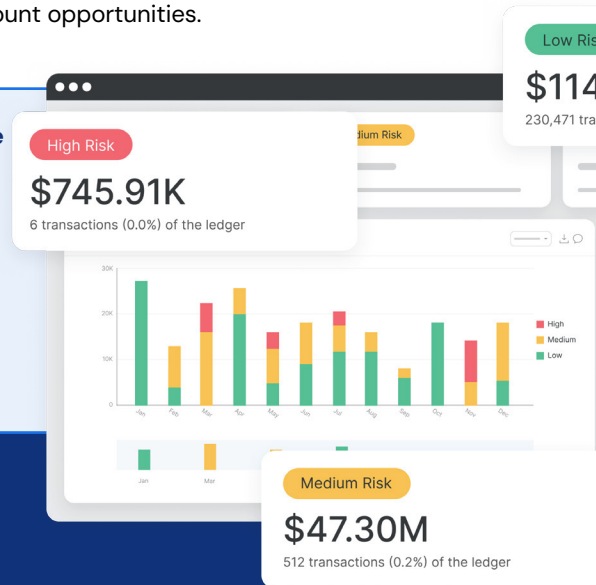

Configuration Errors: Strengthens system reliability by detecting mapping or setup issues within AP settings.

Missed Discounts: Increases savings by capturing early payment and volume-based discount opportunities.

MindBridge drives stronger controls and better working capital performance through continuous AP oversight:

- **Known Error Detection:** Delivers immediate financial value through reduced overpayment and improved cash flow accuracy.
- **Unknown Anomaly Detection:** Drives process improvement and system integrity by revealing issues that are difficult to detect and go overlook.
- **Continuous Oversight:** Enables timely assurance, reducing manual review and ensuring consistent control performance across AP operations.

Built for trust & security

MindBridge is trusted by market-leading firms for advanced AI technology, security, and compliance.

MindBridge delivers **visibility, accuracy, and confidence** — empowering financial leaders with data-driven, actionable insights.
